Technical note 04/17  
Battery maintenance

# TN\_SE\_04\_17 Battery

## Battery maintenance

---

Dear customers:

SEAT Sport recommends to maintain the battery charger constant and stable.

In case of a complete emptying of the battery its substitution is recommended as the re-charged battery could still cause electrical power drops on track and therefore the driver could suffer losses of power steering assistance.

Recommended float charge voltage:

2.29Vpc @ 20°C (68°F) or

2.27Vpc @ 25°C (77°F)

Up to two year shelf life
